Reasons for Allowance

Claims 1-14, 16-26 allowed. Claims 1-14, 16-26 is because they contain the language “performing a fuzzy growing operation to extract attended areas from the contrast-based saliency map, the fuzzy growing operation comprising: partitioning the contrast-based saliency map into two mutually exclusive areas as a function of classes of pixels comprising attended and unattended pixel areas; selecting seeds to for the fuzzy growing operation according to a set of criteria such that a seed has a local maximum contrast with respect to other regional perception units and the seed belongs to an attended area; grouping pixels in the contrast-based saliency map with gray levels that satisfy criteria that indicate attended as compared to unattended areas; and iteratively growing the attended area by using grouped pixel as seeds in subsequent fuzzy growth operations until no candidates of the perception units can be grouped.” While iterative region growing based on seeds is well known the art of record (see “Seeded region growing” Adams, R.; Bischof, L.; Pattern Analysis and Machine Intelligence, IEEE Transactions on Volume 16, Issue 6, June 1994 Page(s):641 – 647, it is not combinable with Warnik in this case because Warnick would not be seeded at a “point of maximum contrast” as required by the claims.
